

Disease and Insect Prevention

Whether some mites are in the soil, or fungal spores travel a long distance on the air, pests are always trying to make a home on your beautiful plants. There are thousands upon thousands of types of pests that, once present, require specialized treatments to eliminate to keep your plants healthy. Conveniently, there are some measures which can be taken to prevent pests from affecting your plants' health. This guide is an overview of some **preventative treatments** you can easily use at home to take care of your plants!
